Client Portal Brief

Development scope for the Muannas Atelier client portal

October 2026 · Prepared by Zarnaz Owais, Founder & Strategic Lead

Goal

One place where clients review content, give feedback and approve, replacing WhatsApp approvals.

Please confirm which items below are included in your quote and which would cost extra.

1. Users & Access

Three roles, each seeing only what they need.

Role	Access
Admin (Muannas team)	Full access: add clients, upload content, manage projects
Team member	Upload and update content for assigned clients only
Client	Own workspace only: view, comment, approve

- Login by email and password, with "forgot password"
- Works smoothly on mobile, since most clients will open it from WhatsApp links

2. Client Dashboard

The first screen a client sees after logging in.

- Welcome screen with the client's name and logo
- Summary counts: pending approvals, approved, in progress, published
- The client's project list and status of each

3. Content Review (core feature)

The most important part: clients see posts as they will appear and approve them in one tap.

- Instagram-style grid preview of upcoming posts
- Each post shows the image or carousel, caption, platform and planned date
- Reels: a link field (Drive / YouTube / Frame.io) that opens or plays inside the portal
- Buttons on each post: **Approve** / **Request Changes**
- Comment thread under each post, from both client and team
- Revision counter on each post (Round 1, 2, 3)
- Every approval is timestamped: who approved and when

4. Content Calendar

A monthly calendar view of all posts, colour-coded by status.

Status	Meaning
Draft	Team still working on it
Pending Approval	Sent to client for review
Changes Requested	Client asked for edits
Approved	Signed off by client
Published	Live on the platform

5. Projects & Tasks

Clients can see where each piece of work stands.

- Projects per client (e.g. "October Content", "Brand Identity")
- Simple task list with status and due dates
- Progress visible to the client

6. Files & Assets

Each client gets a shared folder.

- Holds brand kit, logos, guidelines and final deliverables
- Clients can upload files too (raw photos, references)

7. Notifications

Email alerts plus shareable links that we can send on WhatsApp.

- Email to the client when new content is ready for review
- Email to the team when the client approves or comments
- A shareable direct link to each review batch, to send on WhatsApp

8. Admin Panel

The Muannas team's control room.

- Add or remove clients and team members
- Bulk upload posts
- See all pending approvals across all clients in one view

9. Payments & Invoices

Clients see what they owe and what they have paid, without chasing on WhatsApp.

Status	Meaning
Pending	Invoice issued, not yet due
Due Soon	Payment due within 3 days
Overdue	Past the due date
Paid	Payment received and confirmed

- Each invoice shows amount, issue date, due date and status
- Client can view and download invoices as PDF
- Payment history for each client
- Admin uploads invoices and marks them paid
- Automatic email reminder before the due date and when overdue

10. Performance Reports

Monthly results in one place, so clients see the value of the work.

- Monthly report uploaded per client (PDF), archived by month
- Summary cards on the dashboard: reach, engagement, follower growth, top post
- Numbers entered by the team each month (no platform integrations in the first build)
- Email to the client when a new report is available

11. Branding

The portal should feel like Muannas: clean, minimal and premium.

- Muannas Atelier logo and colours (deep navy and cream)
- Hosted at **portal.muannasatelier.com**

12. Technical Requirements

Muannas Atelier must own everything.

- Code, hosting, domain and database set up under Muannas Atelier accounts
- Full code handover (GitHub or zip) plus all admin logins
- Each client's data strictly separated
- Reels by link only (no heavy video uploads) to keep storage costs low
- All monthly running costs shared before building

13. Delivery & Support

Payment is tied to a working portal, not just delivery.

- Timeline: to be agreed
- Payment: 50% upfront, 50% after testing with a live client
- 30–60 days of free bug fixes after launch

Phase 2 (later, not now)

Not part of the first build: Arabic version, WhatsApp notifications, online card payments, and automatic performance data from Meta and TikTok.
